CONDUCT LABORATORY TESTS FOR WASTE MATERIALS TREATMENT KPME LTD, Ukraine

FINAL REPORT

Bor, April 2022

Subject: FINAL REPORT FOR LABORATORY TESTS FOR
WASTE MATERIALS TREATMENT

Client: LIMITED LIABILITY COMPANY "KOSTIANTYNOVSKY PLANT OF
METALLURGICAL EQUIPMENT" (KPME LTD), UKRAINE

Name of the Report: **LABORATORY TESTS FOR
WASTE MATERIALS TREATMENT**

Contractor: MINING AND METALLURGY INSTITUTE BOR
CENTER FOR DEVELOPMENT TECHNOLOGIES IN METALLURGY

Research team:

PART I and PART II

Ph.D. Vesna Conić, B.Sc. Metallurgy
Suzana Dragulović, B.Sc. Technology
Ph.D. Dragana Božić, B.Sc. Metallurgy

PART III

M.Sc. Srđana Magdalinović, B.Sc. Mining
Ph.D. Silvana Dimitrijević, B.Sc. Metallurgy
Ph.D. Sanja Petrović, B.Sc. Mining

PART IV

Radojka Jonović, B.Sc. Technology
Ph.D. Ljiljana Avramović, B.Sc. Technology
M.Sc. Vanja Trifunović, B.Sc. Technology
M.Sc. Miloš Janošević, B.Sc. Metallurgy

Number of copies: 2

**HEAD OF
Center for Development
Technologies in Metallurgy**

Ph.D. Ljiljana Avramović, Scientific Associate

**GENERAL MANAGER
Mining and Metallurgy Institute Bor**

Ph.D. Mile Bugarin, Scientific Advisor

CONTENT

INTRODUCTION	1
PART I: LABORATORY TESTS FOR CLINKERS MATERIAL TREATMENT	2
1. LABORATORY TESTS FOR CLINKERS MATERIAL TREATMENT	3
1.1. Formation of technological clinker sample	3
1.2. Chemical and physical-mechanical characterization	3
1.3. Determination the grain – size distribution of sample	3
1.4. Mineralogical analysis of sample	4
1.5. Laboratory experimental tests for clinker treatment	11
1.6. Treatment of solid residue after copper leaching: chloride process of leaching in order to obtain Pb-Ag concentrates	16
1.7. Leaching of Clinker in sulphuric acid solution	16
1.8. Treatment of solid residue after acid leaching Cu and Zn: chloride process of leaching in order to obtain Pb-Ag concentrates	18
1.9. Treatment of solid residue after chloride process of leaching in order to Au and Ag recovery	19
1.10. Chemical and XRD analysis of solid residue after leaching of Au and Ag	20
1.11. Technological scheme of the processing process 1kg Clinker waste materials	22
1.12. Chemical characterization of products obtained from the process processing 500g Clinker waste material	24
1.13. Material balance	25
1.14. Normative and electricity for processing 1kg Clinker waste materials	27
1.15. Quantities of products which would be obtained by processing 1 kg of Clinker waste material	28
1.16. Conclusion	28
PART II: LABORATORY TESTS FOR LEAD DUSTS MATERIAL TREATMENT	31
2. LABORATORY TESTS FOR LEAD DUSTS MATERIAL TREATMENT	32
2.1. Formation of technological Pb dusts sample	32
2.2. Chemical and physical-mechanical characterization	32
2.3. Determination the grain – size distribution of sample	32
2.4. Mineralogical analysis of sample	33
2.5. Laboratory experimental tests for lead dust treatment	36
2.6. Testing of the parameters of the acid leaching the Pb dust in order to obtain copper and zinc	37
2.7. Treatment of solid residue after copper leaching: chloride process of leaching in order to obtain Pb-Ag concentrates	41
2.8. Leaching a Pb dust in sulphuric acid solution	42
2.9. Treatment of solid residue after copper leaching: chloride process of leaching in order to obtain Pb-Ag concentrates	44
2.10. Treatment of solid residue after chloride process of leaching in order to Au and Ag recovery	45
2.11. Technological scheme of the processing 1kg Pb dust	47
2.12. Chemical characterization of products obtained from the process processing 500g Pb dust	49
2.13. Material balance	50

2.14.	Normative and electricity for processing 1kg Pb dust waste materials	52
2.15.	Quantities of products which would be obtained by processing 1 kg of Pb dust waste material	53
2.16.	Conclusion	53
PART III: LABORATORY TESTS FOR SECONDARY SLAG TREATMENT		56
3.	LABORATORY TESTS FOR SECONDARY SLAG TREATMENT	57
3.1.	Characterization of the secondary slag sample	57
3.1.1.	Formation of technological sample	57
3.1.2.	Chemical and physical-mechanical characterization of a sample	58
3.1.3.	Determination of a grain – size distribution	59
3.1.4.	Mineralogical analysis of sample	65
3.2.	Laboratory technological tests of the possibility of obtaining copper, lead and zinc concentrates by flotation concentration	76
3.2.1.	Determination of grinding parameters	76
3.2.2.	Investigation of the possibility for concentrate obtaining	79
3.2.3.	Magnetic separation	87
3.2.4.	Conclusion	88
3.3.	Hydrometallurgical treatment of the separation Ag, Au, Cu, Zn and Pb directly from the secondary slag and/or from the concentrate after flotation process	89
3.3.1.	Acid leaching of secondary slag with sulfuric acid	89
3.3.2.	Conclusion	95
3.3.3.	Alkaline leaching of slag and calcine	96
3.3.4.	Alkaline leaching of calcine	99
3.3.5.	Conclusion	99
3.3.6.	Testing of the process parameters of sulphatization roasting and leaching the obtained calcine in the order to obtain copper	100
3.3.7.	Testing the process parameters of sulfatization roasting and leaching obtained calcine in the aim to obtain copper, zinc, lead and silver on enlarged sample	130
3.4.	Material balance of the process	143
3.5.	Conclusion	148
PART IV: LABORATORY TESTS FOR ELECTROLYTIC SLIME TREATMENT		150
4.	EXPERIMENTAL LABORATORY TESTS OF ANODE SLUDGE TREATMENT FROM UKRAINE	151
4.1.	Formation of technological sample	151
4.2.	Chemical and physical-mechanical characterization of anode sludge samples	151
4.3.	Granulometric composition of anode sludge samples	153
4.4.	Mineralogical analysis of anode sludge sample	157
4.4.1.	SEM-EDS analysis	157
4.4.2.	XRD analysis	160
4.5.	Experimental laboratory tests of anode sludge treatment	161
4.5.1.	Experimental investigations of anode sludge decopperization process	161
4.5.2.	Experimental investigations of silver leaching process	171
4.5.3.	Experimental investigations of the lead leaching process	178
4.6.	Technological scheme of anode sludge treatment process and product characterization	187
4.7.	Material balance of the process	188
4.8.	Consumption of normatives for the treatment of 1 kg of anode sludge	189
